- **Cloud**   **:** Azure basics
- **Source Control**   **:** GIT || Visual Source Safe
- **Tools**   **:** Postman **||** MS Excel || MS Word || MS Power point

Project Experience:

1) **Hire Guard Back office:** (https://backoffice.hireguard.co/)

   Angular Developer (Typescript)   **Nov 2023 – Present**

   Client: Expert Hiring, USA

   Description : HireGuard is a project I've been working on that helps staffing agencies and companies manage their hiring better. It's a platform where clients can see and manage candidate information easily. One of its main goals is to prevent "backdoor hires," where a company hires a candidate directly that was initially introduced by a staffing agency.

   To catch these situations, HireGuard uses smart technology that looks at data from places like LinkedIn and job boards. It's designed to be user-friendly, with features like secure login, easy profile management, and tools to keep track of candidate updates. It also connects smoothly with Applicant Tracking Systems (ATS), which many companies use to manage their hiring processes.

   For example, clients can update candidate details by uploading files or using their ATS directly through HireGuard. If there's any sign of a backdoor hire, HireGuard sends alerts to the staffing agency and keeps a record on a special page in the platform.

   Besides managing candidate data, HireGuard also handles billing through Payware, where clients can handle payments, update their billing info, and get invoices. It's secure too, with options for resetting passwords and keeping an eye on any suspicious hiring activity within the first year.

   Responsibilities :
   - Integrating various APIs to retrieve and display data effectively.
   - Implementing user authentication and security features, including password reset and profile management
   - Enabling users to upload candidate details via Excel and integrate their ATS for data fetching.
   - Developing pagination, sorting, and filtering functionalities to enhance data display and navigation.
   - Collaborating with team leads to ensure seamless data handling and improve user experience
   - Used AWS CodeCommit & Git as a version control system and for Source Code Management system

2) HireGuard Promotional site (https://hireguard.co/)

Angular Developer (Typescript || WebApi Mvc core|| SQL)   **Sep 2023 -Present**

Client: Expert Hiring, USA

Description : Developed a comprehensive promotional site for Hire Guard, meticulously designed to offer a seamless and user-friendly experience. This platform enables users to gain a thorough understanding of the Hire Guard product, effortlessly sign up for an account, and select from a range of plans tailored to meet their specific hiring needs. The intuitive interface guides users through the payment process, ensuring a smooth transaction experience. Upon completing the payment, an automated email notification is sent to both the client and our dedicated sales team, facilitating effective communication and prompt follow-up actions. This ensures that all parties are consistently informed, contributing to a streamlined and efficient operational workflow.

Responsibilities :

- Led the development of the promotional site for Hire Guard's cutting-edge back office platform
- Implemented essential features including Client Sign Up and Plan Purchase,
- Implementation of stored procedures, enhancing data retrieval and storage capabilities.
- Integrated RESTful APIs with Swagger documentation to facilitate efficient and reliable communication between the front-end and back-end systems.
- Implemented comprehensive tracking for user actions within the web application
- Used AWS CodeCommit & Git as a version control system and for Source Code Management system

3) Expert Marketing (https://embackoffice.experthiring.com/)

Dot Net Developer (C# Mvc core|| SQL || JQuery)   **Feb 2023 –Aug 2023**

Client: Expert Hiring, USA

Description : Developed Expert Marketing, a sophisticated Task and Campaign Management System utilizing the .NET Core MVC framework. This system provides a centralized platform for managing tasks and running marketing campaigns efficiently. Users can create and assign tasks, track their progress, and monitor campaign performance seamlessly. Leveraging the MVC architecture, the platform ensures robust functionality and a user-friendly experience. Key features include campaign creation, audience targeting, scheduling, and comprehensive performance analytics.

Responsibilities :

- Developed a user management module to create and manage useraccounts with different roles and permissions.
- Implemented functionality for creating and managing tasks and campaigns, tailored for sales and account managers to enhance productivity and organization.
- Developed advanced features for campaign management, including audience targeting, scheduling, and performance analytics, allowing precise targeting and impactful marketing efforts.
- Managed email functionalities within the system, including sending and receiving emails, to enhance communication and engagement within campaigns.
- Implementation of stored procedures, enhancing data retrieval and storage capabilities
- Used AWS CodeCommit & Git as a version control system and for Source Code Management system

4) Client portal

Angular Developer (Typescript || Web Api || SQL)   **Oct 2022 –Jan 2023**

Client: Expert Hiring, USA

Description: Client portal is for Experthiring.com, designed to optimize the recruitment process and enhance client-platform interaction.

The project involved implementing features such as streamlined job posting, candidate profile

management, and intuitive interview scheduling functionalities. Integrated email and SMS notification systems kept candidates informed about application statuses and interview schedules, ensuring timely communication.

Account managers accessed the portal to facilitate smooth client communication and resolve inquiries promptly. The project's success was underscored by the integration of client feedback mechanisms, enabling agile adjustments to recruitment strategies for improved efficiency and client satisfaction.

Responsibilities :

- Job Posting and Interview Scheduling: Implemented functionality for job postings and interview slot selection for clients and candidates, enhancing the recruitment workflow.
- Time Slot Management: Developed a mechanism to prevent the selection of the same time slot by multiple candidates while allowing clients to select the same time slot for different candidates, ensuring efficient scheduling.
- API Development and Modification: Implemented and modified API methods to support job posting and interview slot selection functionalities, ensuring robust and scalable backend support.
- Client Interaction: Facilitated account managers' access to the portal to ensure smooth client communication and promptly resolve inquiries, thereby improving the overall client experience..
- Used AWS CodeCommit & Git as a version control system and for Source Code Management system

5) **Candidate Registration**
Dot Net Developer (ASP.Net Core MVC || SQL || ADO.Net || J Query)   **July 2022 –Aug 2023**
Client: Expert Hiring, USA
Description: Web Applications used for system incorporated a dynamic email feature that generated personalized links enabling candidates to update their personal details and resumes seamlessly.
Responsibilities || June 2022 –Sep 2022

- Involved in Back End Development with C#, MVC core and SQL Server
- Developed and maintained a user submission form using C# within the application.
- Implemented client-side and server-side validations, secure data handling and error handling for user inputs.

Achievements:

- Received a shout-out from the IT Manager for learning and implementing project a new version in Angular.
- Received an Appreciation email from CEO on Quick update on new UI & new functionality implementation in Hireguard.

Academic Profile:

- **Ideal Institute of Technology** ||B -Tech ||2016 -2020 || 7.0 CGPA ||
- **Pragathi Junior College** || Intermediate || 2016 || 65% ||
- **Z.P.Public School** || School || 2014 || 6.9 CGPA ||

Declaration:

I Hereby Declare That All The Information In The Resume Is True To My Knowledge.

Date: Signature,
Place: Hyderabad   M.V Venkata Ramana.
